

日本のお客様への販売に努力を投資しています。

DINEX
Success of Our Customers = Our Success

DINEX Ltd. Hungary supports Electronic Manufacturers by providing SMT Equipment and Spare Parts globally, we are selling our products to customers in Asia (Japan) and rest of the world. As a prefatory remark we would like to lay down that DINEX always checks the machines before shipment as a rule and has a number of satisfied customers worldwide, this shall serve as a proof of the reliability of the products we offer, points out the president of the company Mr. Keviczky. Our customers can benefit from secondhand production assets with advantageous price/value ratio!

Japanese electronics manufacturing market has always been a precious segment for us. We aim to satisfy their high-end expectations by providing the best machines at best possible prices!

In the history of electronics Japanese inventors have often come up with solutions aiding the electronics industry, which was first witnessed in the '80s in the area of micro-electronics. This provided ample opportunities the development to start in the area. Although there is fluctuation in the export sensitive Japanese economy recently, it will again reach a firm growth rate.

We tend to think that Japanese EMS providers, due to the specificity & high-complexity of the products being assembled there, need high-end & good quality equipment. In effect, DINEX is striving to offer SMT equipment suiting their needs: we can supply machines, feeders for Fuji, Panasonic, i-Pulse, Hitachi and Yamaha.
